COMMENCEMENT OF FIELD BASED EXPLORATION - DINGO GOLD PROJECT

- **Detailed geological mapping and geochemical sampling program commenced across Dingo Gold Project**
- **Program aims to define extent, tenor and controls on mineralisation**

Blina Minerals NL (“Blina” or “the Company”, ASX: BDI) is pleased to announce that field based exploration has commenced at the Dingo Gold Project, located in the Eastern Goldfields Region of Western Australia.

Dingo gold mineralisation is associated with the McAuliffe Well Syenite. The mineralisation at Dingo has been defined occupying an area of 400x300m from a depth of 8m. Mineralisation is hosted in ferruginous, cemented rock and saprolite developed over the syenite. The syenite itself represents a far larger exploration target that warrants further investigation.

Competent Persons Statement:

The information in this announcement that relates to the Exploration Results is based on information compiled and fairly represented by Mr Robert Jewson, who is a Member of the Australian Institute of Geoscientists and a consultant to Blina Minerals NL. Mr Robert Jewson has sufficient experience relevant to the style of mineralisation and type of deposit under consideration, and to the activity which he has undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Robert Jewson consents to the inclusion in this report of the matters based on this information in the form and context in which it appears.
